Six-Year Transportation Improvement Program (TIP) Overview

1. What is the Six-Year Transportation Improvement Program (TIP)?

The Six-Year Transportation Improvement Program, or TIP, is a short-range planning document that is annually updated based on needs and policies identified in the Redmond Comprehensive Plan and Transportation Facility Plan. It represents Redmond's current complete list of needed projects and programs for the next six years. The document also identifies secured or reasonably expected revenues and expenditures for each of the projects included in the TIP. Typically, projects listed in the first three years of the document are shown as having secured funding while projects in the last three years can be partially or completely unfunded.

2. What is included in the TIP?

The central part of the TIP is Appendix A, simply titled Project List. All other portions of this document are meant to support and further clarify the Project List. The Project List includes two primary items, the list of projects sorted into seven categories and the current funding status of each project.

A. Project Categories

Projects contained in Redmond's TIP are organized into seven categories. Two of the categories are titled *Preservation* and *Safety and System Management*. These categories are the most basic to any transportation plan. Preservation and Safety are designated as the two highest priorities for receiving funding in the Redmond Comprehensive Plan and Transportation Master Plan. Preservation projects maintain the existing transportation system by overlaying, rehabilitating, and reconstructing existing transportation facilities, such as pavement and bridges. Safety improvements use a variety of tools to help reduce and prevent traffic collisions. System Management projects are included in the Safety category because they improve the operation of the existing transportation system by making it operate more safely, reliably, and efficiently.

The other five categories are titled *Major Street*, *Minor Street*, *Bikes and Pedestrians*, *Transit and High Occupancy Vehicles* (*HOV*) and *Transportation Demand Management*. Included in each of these categories are new projects that expand and improve existing facilities and services, or construct new pieces of our transportation system to make it easier to move around Redmond.

Programs are also included in their appropriate category. Programs are sources of ongoing funding used for collections of small projects throughout the City that help integrate the transportation system. These programs offer flexibility and responsiveness to immediate needs and opportunities, for example, the Neighborhood Traffic Calming Program. This program is a collaborative effort of City staff and local residents to identify traffic problems and develop solutions to reduce the impacts of traffic on neighborhoods.

B. Project Funding and Project Cost

The TIP Project List not only identifies the projects planned over the next six years, but it also reports the amount of funds currently allocated for each project during the years covered by the six-year TIP. The estimated total project cost is also reported on the TIP Project List. The estimated total project cost may differ from what is actually represented in the six-year TIP if the project was started prior to the first year covered in the TIP or the project is planned to continue far beyond the final year covered in the TIP.

Planned expenditures for each project are summarized into four funding categories in Appendix A. These four funding categories represent the following revenue sources used to fund projects:

- 1. **Unfunded** The portion of the project cost planned for the six-years included in the TIP currently without approved funding.
- 2. **Local Funding** This includes the following funding categories:
 - a. **Funded by Other Local Jurisdictions** Funds that come from partnerships with other jurisdictions and organizations.
 - b. **Capital Investment Program (CIP)** The transportation portion of the CIP includes a variety of funding sources, including transfers from the City general fund, real estate excise tax, motor vehicle excise tax, motor vehicle fuel tax, sales tax on construction, and investment interest.
 - c. **Developer** Currently, the largest source of developer contribution is in frontage improvements, although supplemental mitigation has also been significant in recent years.
 - d. **Business Transportation Tax (Business License Surcharge)** 50 dollars per employee limited duration surcharge on Redmond's business license fees is earmarked for transportation projects.
 - e. **Impact Fees** Impact fees are assessed against building developments and improvements as they occur throughout the City.
 - f. **Other** Miscellaneous funding sources that do not fit into the categories above.
- 3. **Federal Funding** Federal grant funding is available through many competitive processes included in Federal transportation legislation.
- 4. **State Funding** State grant funding is available through a variety of competitive programs. The Transportation Improvement Board (TIB) administers many of these programs.

The Total Project Cost column included in Appendix A is based on varying levels of cost estimating. As the project moves from the planning level to a more detailed level of design, cost estimates are refined based on the more detailed information. The following defines the cost estimate types in order of increasing detail and certainty:

1. **Pre-Project Planning Estimate:** These project placeholders are allocations of funds used where a significant need has been identified, but planning efforts to develop a project scope are not yet significantly underway. Without some type

- of project scope it is very difficult to develop a detailed cost estimate. These cost estimates have the potential to change significantly as the project scope becomes more defined.
- 2. Planning Level Estimate / Engineer Estimate: These cost estimates are based on a generally defined scope that may include multiple alternatives. Cost estimates are usually based on limited fieldwork and general cost assumptions. No actual design work has been done prior to the development of these cost estimates. The cost estimate could still change significantly as design work begins but should be more reliable than the Pre-Project Planning Estimates.
- 3. **Preliminary Design Report:** These cost estimates are based on actual preliminary design work. If done for all facets of the project and there are not further additions to the project scope, these project estimates should represent a fairly dependable estimate of the total cost of the project.

Cost estimates are updated for many projects as part of the TIP update, either because new cost estimating was done or the current estimate was inflated at 3% per year to the year work would begin on the project.

3. Developing the TIP

The annual TIP update starts with the previously adopted TIP. Projects in the previously adopted TIP are reviewed and projects that have been completed, or because of changing conditions, are no longer needed are removed from the TIP. The remaining projects carried over from the previous TIP are reviewed for changes to cost estimates, project funding, schedule, or scope during the update process to ensure that the best information is represented in the TIP.

New projects are generated from many sources, including appointed boards and committees representing bicycles and pedestrians, parks, traffic safety, and trails; elected officials; City of Redmond staff; and other interested individuals and groups. In many cases, City of Redmond staff use tools such as the Redmond Pavement Management Program (RPM), analysis of accident data, and transportation modeling to help identify potential new projects. Potential new projects undergo a review of scope, priority, schedule, financing concepts, and compatibility with the Redmond Comprehensive Plan and Transportation Master Plan.

Updated projects from the previous TIP and new projects are then used to create a draft TIP project list. The phasing and funding of these projects in the draft TIP is based on an evaluation of project priority compared with priorities laid out in the Redmond Transportation Facility Plan, commitments to projects and programs that are already underway, partnerships the City has entered into with other jurisdictions and agencies, and new opportunities that arise to leverage local transportation funding in combination with other funding sources.

Once the draft TIP has been developed, a public hearing is held to provide an opportunity for the community comment. Based on the results of the public hearing and comments

from the Redmond City Council a final version of the TIP is developed. This final version is then adopted by the City Council.

4. Relationship of the TIP to other Transportation Documents

A. Six-Year Capital Investment Program

Once adopted, the TIP helps to guide funding and implementation priorities during the development of the transportation portion of the 6-Year Capital Investment Program (CIP). Sometimes referred to as the Capital Improvement Program, the CIP is a six-year financial plan addressing capital needs and is updated along with the development of Redmond's biennial operating budget. The CIP can be considered a subset of the TIP. The CIP shows the City-funded portion of projects and is constrained by current budget forecasts, whereas the TIP shows the complete project list with the variety of funding sources and partners involved.

B. State and Federal Requirements

State law requires that each city develop a local TIP and that it be annually updated (RCW 35.77.010). It is also requires that projects be included in the TIP in order for cities to compete for transportation funding grants from most Federal and State sources. Federal grant funded and regionally significant projects from the first three years of the City's TIP are included in the Regional TIP, which is assembled by the Puget Sound Regional Council for King, Kitsap, Pierce, and Snohomish Counties. The regional TIPs (RTIP) from around the State are then combined to form the State TIP (STIP), which is approved by the Governor and then submitted to the Federal Highway Administration and Federal Transit Authority for their review and approval.

5. Future Updates

The TIP is an excellent guide to assist with planning transportation investments. The initiatives for next year's update remain much the same as the prior year.

- Review and update cost estimates included in the TIP.
- Further develop program reporting as part of TIP.

6. Contact Information

Should you have questions or wish further information, please contact either of the following City staff:

Don Cairns, Transportation Services Manager, 556-2834, dcairns@redmond.gov Joel Pfundt, Principal Planner, 556-2750, jpfundt@redmond.gov

Appendix A - Project List (Exhibit A)

All Six-Year TIP projects and programs are arranged into seven categories: *Bikes and Pedestrians, Major Streets, Minor Streets, Preservation, Safety and System Management, Transit and HOV* and *Transportation Demand Management.* Projects and programs are classified in the category that best represents the project, in many cases projects and programs make improvements for multiple categories. The types of projects and programs included in each of these categories are described below:

- **Bikes and Pedestrians** Projects that focus on making the community more safe and accessible for non-motorized modes of transportation.
- **Major Streets** Large street projects that include significantly modifying a street section. These projects usually include some combination of the following: additional traffic lanes, additional turn lanes at intersections, bridges, new/modification of traffic signals, bike lanes, planter strips, medians, sidewalks, and/or trails.
- **Minor Streets** Small street projects that focus on minor modifications at a particular intersection or small segment of street. These projects usually include some combination of the following: additional turn lanes at intersections, new/modification of traffic signals, bike lanes, and /or sidewalks.
- **Preservation** Projects that maintain the existing transportation system by overlaying, rehabilitating, and reconstructing existing transportation facilities, such as pavement and bridges.
- **Safety and System Management** Projects that improve the operation of the existing transportation system by making it operate more safely, reliably, and efficiently.
- **Transit and HOV** Projects that improve the attractiveness of using transit and high occupancy vehicles (HOV) by increasing reliability and decreasing travel time.
- Transportation Demand Management Programs that improve existing transportation system efficiency by altering transportation system demand through management of pricing, services, employer incentives such as staggered work hours and telecommuting, and regulations, rather than capital improvements.

*Total Project Cost represents the total estimated cost of the project. The funding represented in the six-year TIP may be less than the total project funding for two reasons. One, the project is underway and has expended money during years prior to the first year of the TIP. Two, the project is planned for the later years of the TIP and will not be completed by final year in the TIP.

Appendix B - Project Location Map

This map represents all of the projects that can be mapped from the TIP. Projects that were not mapped include programs and planning studies (e.g. Transportation Demand Management, pavement management, Transportation Master Planning).

Appendix C - Project Descriptions

More detailed project descriptions are provided in this section for the projects included in the TIP.

BIKES AND PEDESTRIANS

B1 Bicycle Facilities Improvement Program

Installation of improvements to bicycle lanes and routes on selected streets throughout City.

B2 <u>Sidewalk Improvement Program</u>

Installation of improvements to sidewalks and routes on selected streets throughout City.

B7 <u>School-Zone Speed Limit Flashing Beacons</u>

Design and install "20 MPH When Flashing" school speed limit flashing beacon signs for Redmond's Elementary Schools.

B9 NE 51st Street Sidewalk

Install sidewalk on the uncompleted portions on the south side of the roadway.

B10 Puget Sound Energy Trail

Construct permanent improvements on the trail that links Redmond-Woodinville Road with the planned pedestrian bridge over Sammamish River.

B11 BNSF Railroad Right-of-Way Acquisition, Phase 1

Acquisition of the Burlington Northern Santa Fe railroad right-of-way.

B12 Bear & Evans Creek Trail

The proposed project is a multi-use trail with associated enhancements linking the Puget Sound Energy Trail north of Farrel McWhirter Park to the Sammamish River Trail. The alignment generally follows that of Bear and Evans Creek. With the Bear Creek arm extending southwest across Avondale Road, Union Hill Road, and Redmond Way and the Evans Creek Arm extending south across Union Hill Road, SR 202, and East Lake Sammamish Parkway to the East Lake Sammamish Trail. Construction of the Trail will be phased.

B14 BNSF Railroad Right-of-Way Acquisition, Phase 2

Acquisition of the Burlington Northern Santa Fe railroad right-of-way.

B19 Puget Sound Energy Trail, Rose Hill Extension

Determine best alignment and extend Puget Sound Energy Trail from its terminus west of Willows Road to 132nd Avenue NE. Trail project would also design and construct a new crossing of Willows Road in the vicinity of the trail crossing.

B23 Redmond Way Sidewalks (South Side)

Construct new 5' sidewalk on south side of Redmond Way along two sections (142nd Ave NE to 145th Ave NE and 149th Ave NE to 152nd Ave NE).

B24 Redmond Way Sidewalk (North Side)

Construct new 5' sidewalk on the north side of Redmond Way from 142nd Ave NE to 145th Ave NE.

B25 SR 520 Bicycle/Pedestrian Bridge, Redmond Town Center to Marymoor Park

Construct nonmotorized bridge and approaches from Bear Creek Trail and Redmond Town Center to Marymoor Park. The purpose of this project is to connect Downtown Redmond and Marymoor Park. Bridge would be designed to create an attractive new gateway/landmark in the City.

B27 Neighborhood Connections

Provide new connections in the form of paths, trails and sidewalks and improve the mapping and signage of existing connections to improve nonmotorized connectivity within and between neighborhoods. These connections will be funded from existing programs and projects.

B28 Downtown Wayfinding

Project will implement wayfinding in Downtown Redmond for pedestrains, bicyclists and Automobiles.

MAJOR STREET

MAJOR STREET

C8 185th Avenue NE Extension

This roadway improvement will complete the 185th Avenue NE corridor between the Redmond-Fall City Highway and Union Hill Road. This is supplemental mitigation requirement of the Millennium Projects. The City of Redmond will acquire the right of way and the developer will design and construct the new street segment.

C14 Union Hill Road Widening Phase 2

Construct additional roadway capacity, bicycle lanes, street lighting, sidewalk, with enhancements to the traffic signal systems at Union Hill Road / Avondale Road and at Union Hill Road / 178th Place NE. The project would include reconstruction of the pavement near the intersection of Union Hill Road / Avondale Road because of high volume of truck traffic.

C16 160th Avenue NE Extension

Construct new 160th arterial from current terminus at approximately NE 99th St north to the street in the Redmond 74 Development. Project would modify existing 160th arterial from NE 90th St north to current terminus and again from terminus to Red-Wood Rd. Improvements include 1 through lane in each direction, left turn lanes, bike lanes, curb, gutter, sidewalks, street lights, storm drainage, right of way and easement acquisition.

C17 Bellevue-Redmond Overlake Transportation Study (BROTS)

Provides Redmond's share of its BROTS commitment to Bellevue's BROTS Projects, as well as financial resources that can be used for BROTS projects that are Redmond's responsibility.

C18 NE 116th Street Widening

Based on the design report for this section of roadway, construct the portions of this roadway not completed by the subdivision developers.

C20 West Lake Sammamish Parkway NE Capacity Improvements

Project includes intersection widening at both NE 51st St. and Bel-Red Rd. to increase capacity. Both intersection widening projects are BROTS projects. During the design phase of the project the cross section of West Lake Sammamish Parkway between the two intersections will be evaluated to determine the short-term and long-term needs to increase the through lanes from one lane in each direction to two lanes in each direction. Left turn lanes will be provided where necessary and improvements will be made to bicycle and pedestrian facilities, including extending the multi-use path on the east side of West Lake Sammamish Parkway.

C22 SR 520 - West Lake Sammamish Parkway to SR 202 Interchange and HOV

This project represents the potential contribution that Redmond will need to make to this project in order for the project to meet the City of Redmond's needs. This construction project is phase 3 of a WSDOT lead project to increase the capacity of the SR 520 / SR 202 interchange. This will be done be by adding additional lanes, fly-over ramps to the interchange, and HOV facilities.

C26 Novelty Hill Road Widening (King County)

City of Redmond will be working cooperatively with King County and their other partners on the EIS, planning, and design of this project.

C27 148th Ave NE/SR 520 Intersection Modification and Widening

Add a northbound lane between the eastbound SR 520 off-ramp and the westbound SR 520 on-ramp, construct a sidewalk adjacent to the added lane, and remove the traffic signal at the SR 520 eastbound to northbound off ramp. This signal is no longer needed because the new lane acts as a weave lane for traffic getting on-and-off of SR 520.

C30 Bear Creek Parkway Extension

Construct new arterial from 159th PI NE to Leary Way and Bear Creek Pkwy intersection. Improvements include 1 through lane in each direction, left turn lanes, curb, gutter, sidewalks, street lights, storm drainage, and right-of-way.

MAJOR STREET

C32 <u>Downtown East-West Corridors Preliminary Design Study</u>

Public Works, Planning and Parks would collaborate to prepare preliminary design drawings for Cleveland Street, Redmond Way and the BNSF right-of-way would be developed to define the character of these three major east-west corridors in downtown Redmond. These plans would be used to make changes to the streetscape and traffic operations along Cleveland Street and Redmond Way pending the completion of Bear Creek Parkway.

C33 NE 24th Street and 148th Avenue NE Intersection Widening

Widen intersection to increase capacity by addting dual left-turn lanes in both the westbound and eastbound directions on NE 24th St. The eastbound right turn lane on NE 24th St would also be extended.

C37 Redmond Way (SR 202) Additional Lanes, Stage II

This project represents Redmond's contribution to the transportation elements of stage two for this project. The total extent and scope of the WSDOT project is a two stage major road widening project from SR 520 to Sahalee Way with a total cost of \$63 million. City of Redmond's contribution to project will result in additional bike lane width, a planter strip on each side of the roadway, the installation of a new traffic signal and a westbound right-turn lane at 187th Ave. NE, median landscaping, the additional southbound lane on an adjacent portion of East Lake Sammamish Parkway, additional pavement width for bike lanes on widened side streets, the illumination of SR 202 as well as the side streets, and utility undergrounding.

C39 164th Avenue NE Extension

Construct new 164th Ave NE from NE 76th St to Cleveland St. Improvements include 1 through lane in each direction, bike lanes, parking, sidewalks, street lights, and storm drainage.

C40 <u>161st Avenue NE Extension</u>

Construct new 161st Ave NE from Bear Creek Pkwy Extension to Redmond Way. Improvements include 1 through lane in each direction, left turn lanes, bike lanes, parking, sidewalks, street lights, and traffic signals at Cleveland St and Bear Creek Pkwy.

C41 Redmond-Woodinville Road (SR 202) at NE 124th Street Intersection Widening

Construct eastbound through/right turn lane and second westbound lane on the east leg of the intersection, and ITS improvements to increase the traffic capacity at the intersection. Project would also add sidewalks and bike lanes on the east leg of the intersection. In order to do this project the creek on the north side of NE 124th St needs to be moved and rehabilitated, which is included in the cost of the project.

C42 SR 520 Overcrossing at NE 36th Street

Construct Overcrossing of SR 520, including 1 through lane in each direction, turn lanes, bike lanes, sidewalks and necessary improvements at intersections on each end.

MINOR STREET

C9 <u>NE 51st Street at 150th Avenue NE Traffic Signal</u>

Install traffic signal at the intersection of NE 51st St and 150th Ave NE.

C28 Redmond Way at Willows Road Intersection Widening

Add a westbound (Redmond Way) to northbound (Willows Rd.) right turn lane. Replace existing sidewalk.

C31 Redmond Way at NE 76th Street Intersection Modification and Widening

Project would increase vehicle capacity by adding a southbound right turn lane at the Redmond Way and NE 76th St intersection.

C34 148th Avenue NE at Old Redmond Road Intersection Modification

Extend northbound left turn lane on 148th Ave NE to improve traffic flow.

MINOR STREET

C35 <u>East Lake Sammamish Parkway at 187th Avenue NE Intersection Improvement</u>

Install traffic signal at E Lake Sammamish Pkwy and 187th Ave NE and add southbound left turn lane on E Lake Sammamish Pkwy.

C36 NE 65th Street and East Lake Sammamish Parkway Intersection Improvement

Reconstruct section of E Lake Sammamish Pkwy in the vicinity of NE 65th St to match street section to the north to be constructed as part of WSDOT SR 202 project and frontage improvements constructed by a developer to the south.

PLANNING

L2 Sammamish Valley Corridor Study

Redmond will engage WSDOT, King County and the City of Woodinville to analyze traffic, transit and nonmotorized operations in this corridor and investigate existing and new roadway alignments to improve safety and increase capacity in the section of the corridor between Redmond and Woodinville. The corridor analysis will include an exploration of future design preferences for the Redmond-Woodinville Road. Willows Road, and 160th Avenue NE.

L5 Transportation Master Plan Implementation

The purpose of this project is to help ensure implementation of the Transportation Master Plan and transportation element of the Comprehensive Plan. It will be used to perform the following: Concurrency Ordinance Update, Impact Fee Update, Union Hill/Novelty Hill Rd Circulation Study, Local Transit Service Study, Freight and Goods Study, and Adequate Maintenance Levels Study. Funding from this line item will also be used for the 5-year update of the Transportation Master Plan.

PRESERVATION

P1 Pavement Management Program

The purpose of the Pavement Management Program is to preserve and maintain the City's pavement infrastructure in a good condition.

P2 Bridge Repair Program

Provide repair and maintenance of the roadway bridges in the City.

P3 East Lake Sammamish Parkway Rehabilitation

Rehabilitate East Lake Sammamish Pkwy by removing some concrete pavement, and performing crack and seat process on remaining concrete pavement. A new pavement overlay will then be done.

P6 Avondale Road Bridge Rehabilitation at Bear Creek

The yearly inspection of this bridge in conjunction with the bridge inventory process determines the need for bridge repair, bridge will need pile reinforcement and bank stabilization.

SAFETY AND SYSTEM MANAGEMENT

S1 Neighborhood Traffic Calming Program

Identify locations within the City, and install physical control devices in neighborhood corridors to slow and control speeding traffic.

S2 Channelization Improvement Program

Provide street marking projects throughout the City.

S4 <u>Miscellaneous/Advanced Engineering and Construction Program</u>

Miscellaneous engineering and construction tasks at various sites within City.

SAFETY AND SYSTEM MANAGEMENT

S5 Street Lighting Improvement Program

Identify, inventory, prioritize and schedule street lighting enhancements. Manage the installation of both Puget Sound Energy owned and City of Redmond owned street lighting locations within the City.

S7 <u>Utility Undergrounding Program</u>

Perform undergrounding of selected overhead utilities, such as power, telephone, and television cable.

S16 Old Redmond Road Widening

This roadway widening project involves installation of curb, gutter sidewalk, underground utilities, street lights to match areas at both ends (Construction of missing section). The project also has a stormwater detention component as well.

S18 <u>Avondale Road Improvements</u>

Construct capacity enhancements in the Avondale Road corridor in the vicinity of the two intersections in coordination with the County's Novelty Hill Road improvement project.

S22 <u>Localized Efficiency Action Program (LEAP)</u>

The purpose of LEAP is to streamline the design and construction of small improvement projects throughout the city to optimize the existing transportation system. LEAP will provide programmatic funding for localized projects, which are considered too large for maintenance staff, but are too small to be individually considered capital improvement projects. These projects are intended to address the following areas of concern: collision reduction, capacity augmentation, and multi-modal circulation. This program is being coordinated by the Business Tax Transportation Improvements (BT/TI) committee.

S26 Redmond Intelligent Transportation System (RITS)

Complete the multi-phase effort to upgrade, interconnect, coordinate and optimize the City's remaining old and outdated traffic signal control equipment. Also, provide improved detection and monitoring of transportation system in order provide better incident response and traveler information.

S28 Redmond Intelligent Transportation System (Overlake to Downtown Redmond Corridor)

Upgrade controller hardware, interconnect, coordinate and optimize the traffic signals along the NE 40th St./West Lake Sammamish Pkwy./Leary Way corridor from 156th Ave. NE to Bear Creek Pkwy. This 2.8 mile corridor is a key connection between the Overlake area and downtown Redmond.

S29 Transportation Concurrency Management

This program supports ongoing efforts to monitor the City's transportation system, identify problem areas, and develop and evaluate potential solutions in order to ensure that the city's transportation system develops concurrently with growth in the community. Particular items supported by this program include traffic counting, travel time studies, traffic modeling, on-call signal review, project cost estimating for the CIP/TIP, and various small area transportation related studies.

S30 Redmond Intelligent Transportation System (Avondale Road Corridor)

As part of this larger King County ITS project expand ongoing RITS project along the Avondale Rd corridor, into downtown Redmond and develop Redmond transportation management center.

S32 Old Redmond Road and West Lake Sammamish Way Traffic Signal

Install traffic signal at Old Redmond Rd and W Lake Sammamish Way.

S33 NE 85th Street Rechannelization

Rechannelize NE 85th St to one through lane in each direction, two-way left-turn lane, parellel parking and bike lanes. Project would include special treatments in front of the downtown Redmond Post Office and Fire Station 11.

SAFETY AND SYSTEM MANAGEMENT

S34 164th Avenue NE Rechannelization

Rechannelize street to one through lane in each direction, two-way left-turn lane, and bike lanes.

S36 NE 104th Street and 166th Avenue NE Traffic Signal

Install new traffic signal and rechannelize intersection at NE 104th St and 166th Ave NE.

S37 NE 116th Street and 172nd Avenue NE Roundabout

Install traffic signal or roundabout at NE 116th St and 172nd Ave NE.

S38 Safety Program

Identify and implement specific measures to create a safer infrastructure for all users. Also intended to fund new traffic signals.

S39 <u>172nd Ave NE Traffic Calming</u>

Install traffic calming elements, street improvements and neighborhood entry features consistent with the results of the 172nd Ave NE Corridor Study.

S40 NE 124th Street at 162nd Place NE Intersection Improvements

Install traffic signal and add left turn lanes on 124th Ave NE at 162nd PI NE.

TRANSIT AND HOV

T5 Redmond Way Sidewalk and Transit Improvements

Sound Transit funded project that includes portions of NE 85th St and Redmond Way in Redmond and Kirkland from 120th Ave NE to 140th Ave NE. Project within Redmond will include sidewalk improvements from 132nd to 139th, transit signal priority, barrier curb to eliminate left turn access from 132nd to 139th, u-turn treatments at 139th and 132nd, and extension of westbound right-turn lane. The purpose of this project is to improve transit and vehicle flow in the corridor, improve pedestrian access to transit, and improve safety in the corridor. City of Redmond is contributing a small amount of funding to complete sidewalk from 139th to 140th.

T8 Demand Management Capital Construction

This project provides funding for capital-oriented projects and programs that support TDM goals and are located within the public right-of-way. It also provides opportunities for seed funding to employers in Redmond to partner with local and regional transit agencies to provide new or enhanced infrastructure to support transit use. Transit shelters, concrete pads, benches, drinking fountains, lighting, crossing aids, and other amenities that support transit and other alternative mode use could be eligible for funding.

T11 Downtown Redmond Transit Center

Construct a new transit center on NE 83rd St adjacent to the existing downtown Redmond park and ride. Project will expand the transit center to include six transit bays (five on street and one on the current turnaround site) and layover space for six coaches and one paratransit vehicle on the current turnaround site. Project will include installation of new shelters, construction of wide sidewalks, and landscaping. This project will support future development of the park and ride site as a transit oriented development.

TRANSPORTATION DEMAND MANAGEMENT

M1 Redmond Trip Reduction Incentive Program (R-TRIP) Partnership Phase II

The Redmond Trip Reduction Incentive Program (R-TRIP) provides financial and staff assistance to Redmond businesses to implement or enhance existing commute trip reduction programs for employees at their Redmond sites. Employers can select from a menu of TDM products or submit their own innovative programs for review and funding.

TRANSPORTATION DEMAND MANAGEMENT

M2 Citywide Rideshare Incentives

The Citywide Rideshare Incentives program builds on past successes by streamlining delivery of incentives and expanding the program to a wider employer and employee audience by making the program available to all employers in Redmond. This will be done by directly providing incentives to the employees. To facilitate administration and ease of use, incentives will be provided via a debit card medium, with program participation and tracking occurring primarily via electronic/web-based means. The project will also match employer contributions, up to a maximum amount, with more favorable match rates being offered to small employers. Promotional and informational materials will be developed and marketed to employers and their employees.

M3 Shuttle Program

Expand local shuttle service, extending to areas outside Willows and SE Redmond, with an emphasis on Overlake. Continue to work with King County Metro to identify potential new routes and partnership opportunities to add new service.

M4 Business Transportation Resource (BTR) and Recognition Program

As a resource primarily supporting small businesses, BTR develops, produces, and provides educational materials and technical support to link businesses to commute related tax benefits and programs to help them provide alternative solutions for their company and employees.

M5 Performance Based Incentive for Commute Trip Reduction

Program provides financial incentives to businesses who participate in the program rewarding them for each trip reduced, as measured by survey results.

M6 Redmond Parking Management Program

The Redmond Parking Management Program is an effort to serve both large and small businesses (including retail) by developing and implementing on-site parking management programs.

M7 <u>Development Required Transportation Mitigation Programs (TMP's), Maintenance & Support</u>
Provide annual program review, notifications and negotiate updates when initiated by building owner.

M8 TDM Demonstration Programs/New Initiatives

Advance trip reduction efforts to City-wide goal of 30% mode split through development of new TDM initiatives including origin based program (residential emphasis) and last/first mile concept (origin/destination links to transit station.)

M10 <u>Bike Stations, Development & Operations</u>

Support bike station development and services at existing and new Redmond Transit Centers.

M11 Transportation Demand Management Program

Provides Capital Facilities such as transit shelters, pedestrian walkways and connections to transit, HOV priority parking programs, signage, etc. within the street right of way or in parking areas, designed to increase the effectiveness of measures that eliminate trip making or support the movement of more people in fewer vehicles, and help to reduce traffic congestion. Provides technical oversight and support to Capital Facilities also develops Non-Capital Programs to disseminate and/or increase awareness of TDM strategies and services among Redmond employers and citizens.

M12 Residential Travel Demand Management Program

Program to provide alternative mode use information incentives and innovative program grants for Redmond residents.

M13 Commute Trip Reduction (CTR) Program Administration

Supports the administration for the Citywide commute trip reduction (CTR) ordinance (state mandate).

Appendix D - Transportation Planning Document Relationship Diagram

The purpose of Figure 1 is to illustrate the relationship between some of the key planning and financial documents that are used in transportation planning. The figure is designed so that the long-range planning documents are at the top and progress down towards implementation and construction of particular projects and programs. A brief description of each document is included below.

Transportation Master Comprehensive Plan Plan (TMP) Transportation Facilities Plan (TFP) **6-Year Transportation Improvement Program** Emergencies (TIP) and **Opportunities** Transportation Capital **Investment Program** (CIP) Developer or Outside City Designs and Agency Designs and Constructs Specific Constructs Projects **Projects**

Figure 1 - Transportation Planning Flow Chart

Transportation Planning Flow Chart Definitions

• Transportation Master Plan (TMP) and Comprehensive Plan: These documents include the vision, strategies, and ultimate transportation plan for the community.

- Transportation Facilities Plan (TFP): Facilities elements of Comprehensive Plan modeled to balance planned concurrency with target land use for target year. These are updated periodically and at five-year intervals.
- **6 -Year Transportation Improvement Program (TIP):** Annually updated plan for all committed and needed improvements in the next six years. Required by RCW.
- Capital Investment Program (CIP): City funded projects updated with the twoyear budget cycle.
- **Developers and Outside Agency Designs and Constructs Projects:** Projects constructed and paid for by developers and outside agencies (e.g. WSDOT, Sound Transit, and Bellevue). In some cases the City contributes some funding to these projects.
- **City Designs and Constructs Specific Projects:** These are the individual CIP projects that the City of Redmond designs and builds.

NOTES:

- 1. Council approves every step of the process from the Transportation Master Plan through acceptance of construction of city projects.
- 2. In addition to the Transportation Facilities Plan, the City of Redmond Comprehensive Plan and Transportation Master Plan include several other key elements such as: Vision, Goals, Policies, modal elements, performance monitoring, regional transportation, 3-year Priority Action Plan and Thoroughfare Plan.
